Re: Proceeding 11-109

Sir/Madam,

I write this to comment on Proceeding Number 11-109.

I am deeply concerned about the possibility of GPS signals being interfered with by Light Squared's proposed wireless broadband system.

I am a blue water sailor and have logged thousands of nautical miles under my keel.

I rely on my GPS chart plotter to safely get me to my destination whether in mid ocean or sailing along a coast.

I am sure the US military has need of a reliable GPS system to properly defend the USA.

Please do not allow the integrity of the GPS satellite navigation signals to be interfered with by Light Squared or any other system in the future.

Be assured that anyone in the world relying on GPS will be as concerned as I if the integrity and reliability of GPS is degraded.

Thank you
Robert Shaw
